

Exchange Server 2000/2003/2007

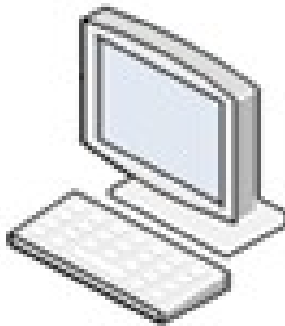

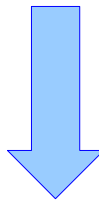

### GEA Suite

Install GEA Suite on any computer you wish. Two NT services transfer **all** incoming/outgoing emails to a SQL Server and allow clients to view all their emails now present on the SQL Server.

SQL Server / MySQL Server

### GEA Viewer

Workstations run GEA Viewer to access archived email. The software can be pushed via GPO as it is only a portable executable. Offline access via its cache file means users always have access to their email.

Find emails very quickly and move them to any storage type you prefer!

- \* Users don't need to maintain PST files.
- \* Old emails can safely be removed from the Exchange server thus freeing resources.
- \* Does NOT need to be installed on the Exchange Server.
- \* Portable executable Viewer allowing users to search and view emails at home.
- \* View, restore and reply to emails in their original format.
- \* PST network file scanner and PST import utility included!
- \* Archived emails are easily relocated via an open format.
- \* Easy License structure.
- \* NO vendor lock-in on the stored data!
